

David Albin

Co-Founder & Advisory Partner · NGP Energy Capital (Carlyle Affiliate)

INVESTOR

Upcoming

CAREER ARC

SNAPSHOT

Currently: Advisory Partner, NGP · Managing Partner, Spectra Holdings (family office)

Background: Stanford BS Physics '81 · Stanford MBA '85 · Goldman Sachs · Bass Investments

READY-MADE OPENERS

Easy start → "We're running an acquisition-focused PDP strategy on the Eastern Shelf — same basic playbook NGP has funded dozens of times. I'd love your perspective on what separates the teams that execute well from the ones that stall."

Going deeper → "NGP has been in the business of evaluating management teams for almost 40 years. When you sit across from a CEO pitching a PDP roll-up, what's the first thing you look for that most people don't ask about?"

Bold move → "You've funded energy companies through every cycle since 1988. A lot of PE firms are rotating out of upstream — do you think they're making a mistake?"

CONVERSATION TOPICS

■ NGP's PDP Acquisition Thesis

NGP has funded dozens of management teams acquiring mature assets — exactly Peak 10's strategy. He can speak to what makes a team investable at this stage. *Ask what the common thread is among the management teams NGP has backed successfully vs. those that didn't work out.*

■ The Carlyle Relationship

NGP became a Carlyle affiliate in 2012 — understanding how that changed deal flow, LP base, and strategy could inform Peak 10's own sponsor relationships. *Ask how the Carlyle affiliation changed NGP's approach to sourcing and structuring deals.*

■ Macro Energy View

Albin is known for tracking macroeconomic data to identify energy trends early. His forward view on natural gas, mature basins, and consolidation directly affects capital availability. *Ask what macro signals he's watching now that most energy investors are ignoring.*

■ Rocky Mountain and West Texas Coverage

TACTICAL NOTES

AVOID

- Don't pitch him directly — he's advisory now, not deploying capital from NGP
- Don't name-drop Carlyle unless he brings it up — the NGP-Carlyle relationship has nuances
